About Next Level Teardrop Rack

"We Design Differently"

Better by Design

Stronger - Faster Assembly - Higher Quality

We take pallet racks and wire decking to a whole new level. We have designed our rack differently--every detail is engineered for performance and long lasting quality for your demanding warehouse environment. The competition just doesn't "rack up."

Galvanized Steel

No Rust, No Chip - Safer, Smarter Storage

Our braces and base plates are constructed of galvanized steel, so there's no rusting or chipping like with painted alternatives. And the light reflective qualities of galvanized steel brighten the warehouse for better product visibility and safety. Upright posts are powder-coated but may be ordered in galvanized steel at no extra charge.

Brace Yourself

Superior Strength - Reliable Stability - Flexibility

Our U bracing is far more powerful than common C Bracing and it's *multi-sized*, enabling you to easily customize rack depths for your customers. Additionally, our frames boast three horizontal braces (make that four for frames 18' and over!) for extreme strength and performance. This triple and quadruple multi-size bracing is just one way we take warehouse storage to the Next Level.

Fast, Easy Assembly

Fewer Parts - Highest Performance - Major Advantage

Our patent pending no-weld base plate is the best in the biz. This rigid bolt-on plate *that looks and acts like a welded plate* has a simple three part construction (welded nut, washer and bolt) and can be assembled simply and quickly for long lasting performance.

Dimples in the plate lock the baseplate and columns into position, further easing assembly. Our base plate is virtually labor free and is a boon for rack repair--replacements can be made in the field with merely a band saw.
